

Hazardous Materials Training with Live Instructor

Virtual Training

Most people prefer in a classroom setting. However, timing and logistics may inhibit training. Crum and Forster is providing viable option to eliminate these issues. It's called virtual training. Training that can take place right from your office that meets your schedule. No travel or additional expense for hotels or meals. This training is not to replace classroom training where you may prefer to have employees receive training. However, employees must receive a certain amount of training to meet NFPA, OSHA, and other regulator standards. Most importantly, training improves efficiency and reduces risk of accidents. As you all are hopefully aware, hazardous materials training is required within 90 days of employment and every three years thereafter at minimum. C & F has partnered with Silverback Consulting to provide classroom training via a computer lead by a 40+ year veteran in the propane and petroleum industry.

Crum & Forster has partnered with Silverback Consulting to provide classroom training virtually. That is training via a computer. This training allows you to obtain training from a 30+ year veteran in the propane industry. Mike DiGiorgio, with Silverback has extensive knowledge in the propane and petroleum industries. He worked as a safety director for a large propane and petroleum company. He has trained many fire fighters on how to safely handle emergencies.

Expense: There is no expense while a Crum & Forster insured.

Equipment Requirements

To obtain the best experience with virtual training, it is important to have good audio and visual equipment. The instructor can assist you with the equipment options and will schedule a day and time to test before the class begins.

- Computer - Desktop, Laptop, or Tablet
- Video and Audio Capabilities
 - For a great training experience, having good video and audio equipment is preferred, but can be reasonably purchased. There are options for single use or larger groups.

Sample Equipment

Logitech HD Pro Webcam C920, Widescreen Video Calling and Recording, 1080p Camera, Desktop or Laptop Webcam

Logitech Conference Cam BCC950 Video Conference Webcam, HD 1080p Camera with Built-In Speakerphone

Training Options

- This training can be done one on one or in groups. If possible, it is best to include as many of your employees as possible in the training.
- Group training can consist of using a room with a computer connected to a large monitor or TV and using teleconferencing equipment to communicate between the instructor and students.
