AGRIBUSINESS

The United States agricultural industry encompasses a broad range of businesses, each having its own unique exposures to risk.

At Crum & Forster, we focus on select industry classes delivering expertise in underwriting, risk engineering and claims. We complement that specialization with customized products and multiline solutions.

Matt Jones | AVP  T 515.446.5221  E matt.jones@cfins.com

TARGET APPETITE

Preferred
- Ag Chemical Dealers/Distributors
- Farm/Ranch Supply Stores
- Feed Manufacturing/Nutrition Services
- Fertilizer Dealers/Distributors
- Fruit/Nut/Vegetable Packing, Processing and Shipping
- Grain Elevators
- Grain/Rice/Flour Milling
- Seed Merchants and Seed Conditioning Plants
- Wineries
- Craft Beverage Producers

Will Consider
- Sugar Refining
- Food Distribution

TARGET ACCOUNT SIZE

- Agribusiness — Premiums of $20,000 or greater
- Winery/Brewery/Distilling — Premiums of $10,000 or greater

AVAILABLE COVERAGES

- Commercial Auto
- Property
- General Liability
- Equipment Breakdown
- Workers’ Compensation
- Employee Benefits Liability
- Employment Practices Liability
- Crime
- Inland Marine
- Supported Excess
- Coverage enhancements and other specialized solutions

CLAIM SERVICES

The long-term success of any insurance company is dependent on the effectiveness of their claims operation. At Crum & Forster, we have been recognized for our award-winning claim services.

When you report a claim to us, you can be assured that it will be handled with efficiency by dedicated claim professionals who share your goals of bringing the claim to a prompt and successful resolution. From initial reporting to final disposition, we are proud of the services we provide our policyholders and producers.

Jorge Echemendia | Vice President
T 973.490.6519
E Jorge.Echemendia@cfins.com

Quality

- More than 500 claim professionals with a nationwide presence, operating nationally
- Specialized claims expertise in each of our business segments
- Proactive early case resolution, but are fully prepared to defend cases
- Proactive litigation management plan with an integrated defense strategy
- Dedicated Special Investigations Unit (SIU) to ferret out fraud
- In-house physician to assist with complex medical cases
- Dedicated subrogation team that relentlessly pursues recovery to benefit our policyholders
- Proactive training and development program emphasizing technical skills, best practices and customer service
- Comprehensive network of approved defense firms with specialty practices

Responsiveness

- Customer service-based culture is embedded into everything we do
- 24-hour emergency response teams
- Full complement of medical management programs providing quality care at competitive pricing
- Medical bill review program produces significantly lower costs than other companies
- Dedicated return-to-work specialist utilizing local charities
- Managed caseloads
- Claim professionals with advanced degrees and designations

Communications

- Client focused stewardship process actively engaging the policyholder and broker
- Claim account executives who develop customized service strategies
- Bilingual specialists
- Integrated claim, underwriting and risk engineering departments
- Online system access to our C&F Connect portal, providing customized reports, executive summaries and adjuster notes
C&F Connect Marketplace is a one-stop shop for all of your risk management needs. This secure, online portal puts the tools you need for loss runs, claims information and reporting at your fingertips.

**Risk Management Simplified**

The Risk Management dashboard provides quick and easy access to claims information through an intuitive interface. This tool makes it easy to find financial information, file notes and related attachments. Automated dashboards provide analytical breakdowns for such items as Top Five Causes of Loss.

**24/7 Claims Reporting**

Accessible on any web-enabled device, C&F Connect makes it fast and easy to report losses 24/7. A claim number is issued automatically once an incident is submitted. Through the portal, you will have access to all losses you reported, including a Notice of Loss form.

**Flexible and Efficient Data Access**

Loss runs and reports are available to run on-demand or can be scheduled to run at time intervals you select. The scheduled reports can be delivered by e-mail, stored within the “My Scheduled Reports” or both.

**Easy to Access**

To access C&F Connect, simply log onto the Crum & Forster website at [https://cf-connect.com](https://cf-connect.com) using your assigned User ID and Password.

If you do not have a User ID, please contact your local Crum & Forster Claims Account Executive or send a request to [CFWebaccess@cfins.com](mailto:CFWebaccess@cfins.com).
RISK ENGINEERING

Services Overview

Crum & Forster’s Risk Engineers work in partnership with our customers to provide a full complement of services from education to comprehensive onsite inspections. Its methodology begins with risk identification. Our team of engineers, drawn from a wide array of disciplines, examines your operation and finds factors that permit us to grade your exposures. This helps you prioritize and manage your risks. Our assessment gives you an informed view of operational risk based on industry benchmarks, guidelines, and best practices. We can suggest actions you can take to decrease risk. The goal is to put in place an effective loss prevention strategy that works consistently over time to lower your operation’s risk of loss. With deep roots going back to 1822, Crum & Forster is a national insurance group consisting of insurance companies and agencies that provide a wide range of standard and specialty insurance products and services. Crum & Forster conducts business through independent agents, brokers, and wholesalers, focusing on property and casualty insurance, as well as accident and health.

Our highly skilled Risk Engineers are strategically located throughout the country and have the experience, training and professionalism to provide risk management solutions to meet your business needs and contribute to your success. We provide high quality technical information and professional opinion regarding risk, and where appropriate, deliver services that improve business results by protecting essential human and physical assets. We employ practical, solution-oriented approaches that specifically target your loss sources.

Our “Planned Service Approach” enables us to work with you to identify those loss sources - both actual and potential - and determine ways to help you minimize your loss costs and expenses.

There are five steps to the program:

1. We conduct a thorough study of your company that includes exposures, hazards and accident trends.

2. Together, we review your current loss prevention efforts, physical location, loss information and other business records.

3. We use our evaluation to discuss and consult with you and top management to pinpoint fundamental loss causes.

4. We create an “Action Plan” with practical recommendations to strengthen existing programs.

5. Together, we maintain an ongoing review of the Action Plan to evaluate progress and effectiveness. If your operations include multiple locations, your local C&F office acts as the service coordinator to oversee consistent development and implementation of your loss control Action Plan across all sites. This provides the foundation for a close working relationship between you and our Risk Engineers.

C&F offers specialized risk engineering services across a wide range of risks:

**Fuel Gas Safety**
C&F Risk Engineers have long experience in propane gas safety. We understand safe delivery procedures, residential and commercial installations, inspection and repairs, and know current industry safety guidelines and regulatory compliance measures. We can assist you in developing customized policy and procedures that address your particular business needs.

Our Risk Engineers can assist you in developing customer warning documentation and implementing programs that track which customers have been provided the information, whether it be new customer information (residential and commercial) or annual mailings. Fuel gas regulations change often and it can be difficult for even the most experienced supplier to stay on top of them. C&F Risk Engineers are in touch with state legislatures and regulatory bodies, and participate in national standard setting bodies such as the NFPA.

On site surveys can be invaluable in determining the strengths and weaknesses in your safety program, so our Risk Engineers are strategically located in key markets to make insured visits easy. Taking a concrete step to decrease risk is just a phone call or email away.

**Life Safety / Property Risk Engineering**
To assist you in controlling potential life safety losses and property fire exposures, C&F Risk Engineers are prepared to help protect your physical assets. We have the
Knowledge and experience necessary to help your company design and maintain its facilities and its fire protection and detection devices. We can also provide technical assistance in other issues including general and hazardous stock storage practices, special hazards such as spray painting and welding, emergency planning, business continuity and physical security.

Loss Analysis
Experience is an excellent teacher. C&F Risk Engineers examine and evaluate your previous losses to detect hidden cause and effect relationships. OSHA recordable injuries are used to calculate incidence rates which are then compared to Bureau of Labor statistics. Armed with all of this information, C&F Risk Engineers make specific recommendations to reduce future accidents and thereby increase operating efficiency, and ultimately, bottom line results.

Ergonomics
Ergonomic issues typically originate from a mismatch between human capabilities and job requirements, and this results in workplace problems that cause or contribute to cumulative trauma disorders (CTD’s), back injuries and muscular strains and sprains. Our Risk Engineers are equipped to conduct detailed task analyses of workstations. Design recommendations are developed to fit job requirements to worker capabilities, resulting in increased productivity, quality and employee morale and reduced frequency of injuries and absenteeism.

Occupational Health Services
Today, considerable emphasis is placed on occupational health hazards. Employers and employees alike are concerned with workplace exposure to contaminants such as industrial dust, mists and fumes, as well as noise and temperature extremes. C&F Risk Engineers have the skills, experience, and tools needed to help you recognize, evaluate and control these exposures to achieve and maintain compliance with regulatory requirements and maintain employee health.

Fleet Evaluations
Preventing motor vehicle accidents is a challenging business problem and our Risk Engineers can provide assistance in developing an effective fleet safety program. Virtually every area of your fleet operation is reviewed including driver selection and qualification, accident investigation, driver training and preventive maintenance. Because no two fleets are alike, we’ll tailor our recommendations to your particular needs.

Training
Competent, up-to-date training is one of the keys to any effective loss prevention program. That’s why C&F Risk Engineers are prepared to assist in supervisory and employee training activities over a wide range of subjects. To provide this service C&F Risk Engineers receive ongoing education and are updated regularly on safety codes and requirements issued by OSHA, NFPA and other regulatory agencies and standard developing bodies.

Media Library and Online Training Resources
As a C&F insured our audio-visual and research lending library is available to you at no charge. Over two hundred titles cover topics such as Fire Protection, Safe Driving, Product Liability, Construction, Workers Safety and related topics. You’ll find our media to be most useful in employee training and education efforts. Employee training is essential to both workplace safety and regulatory compliance. To make it easier to deliver ongoing, effective training, many companies have turned to online safety training as a core component of their overall safety program.

C&F has partnered with two organizations to enable you to purchase online safety training at a discounted rate. These training resources offer a variety of safety training courses ranging from OSHA (general and construction), driver safety (DOT), food and beverage, Mine Safety (MSHA), as well as human resource compliance.

Contractors / Construction Safety
This is one of the most hazardous industries and requires specialized loss prevention knowledge and expertise, starting at the planning stage right through to project completion. Our Risk Engineers have the knowledge and skills to provide assistance in developing and implementing an effective Risk Engineering Program that controls hazards at each job site.

The Bottom Line
An effective loss prevention program will benefit a company’s bottom line. First, a positive loss record may reduce the cost of your insurance program. Second, because every industrial accident involving an employee, motor vehicle, customer or property results in insured and uninsured costs, preventing such accidents is a real money saver.
